

WITHAM AND HUMBER  
DRAINAGE BOARDS

# Jane Froggatt, MA BA (Hons), Dip HSM. Chief Executive.

All Party Parliamentary Group for  
Sustainable Flood and Drought Management.

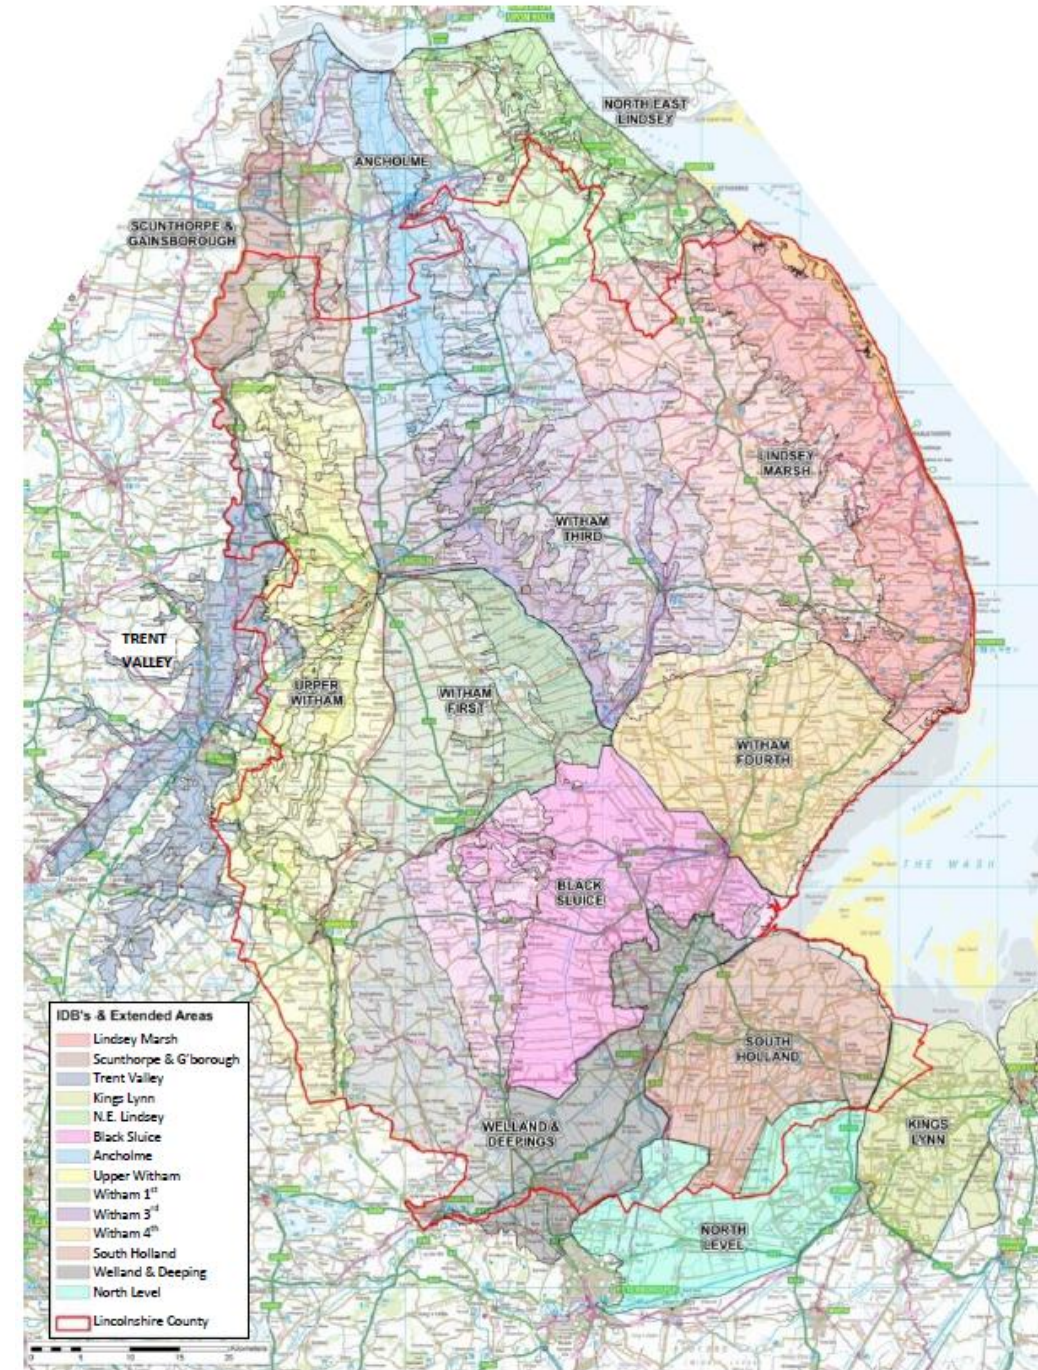

**APPG & AGM: "Ignoring Main River Maintenance at our peril-  
Short term win or long-term loss?"**

Portcullis House: 9:45am-11:00am, Wednesday 10.12.25

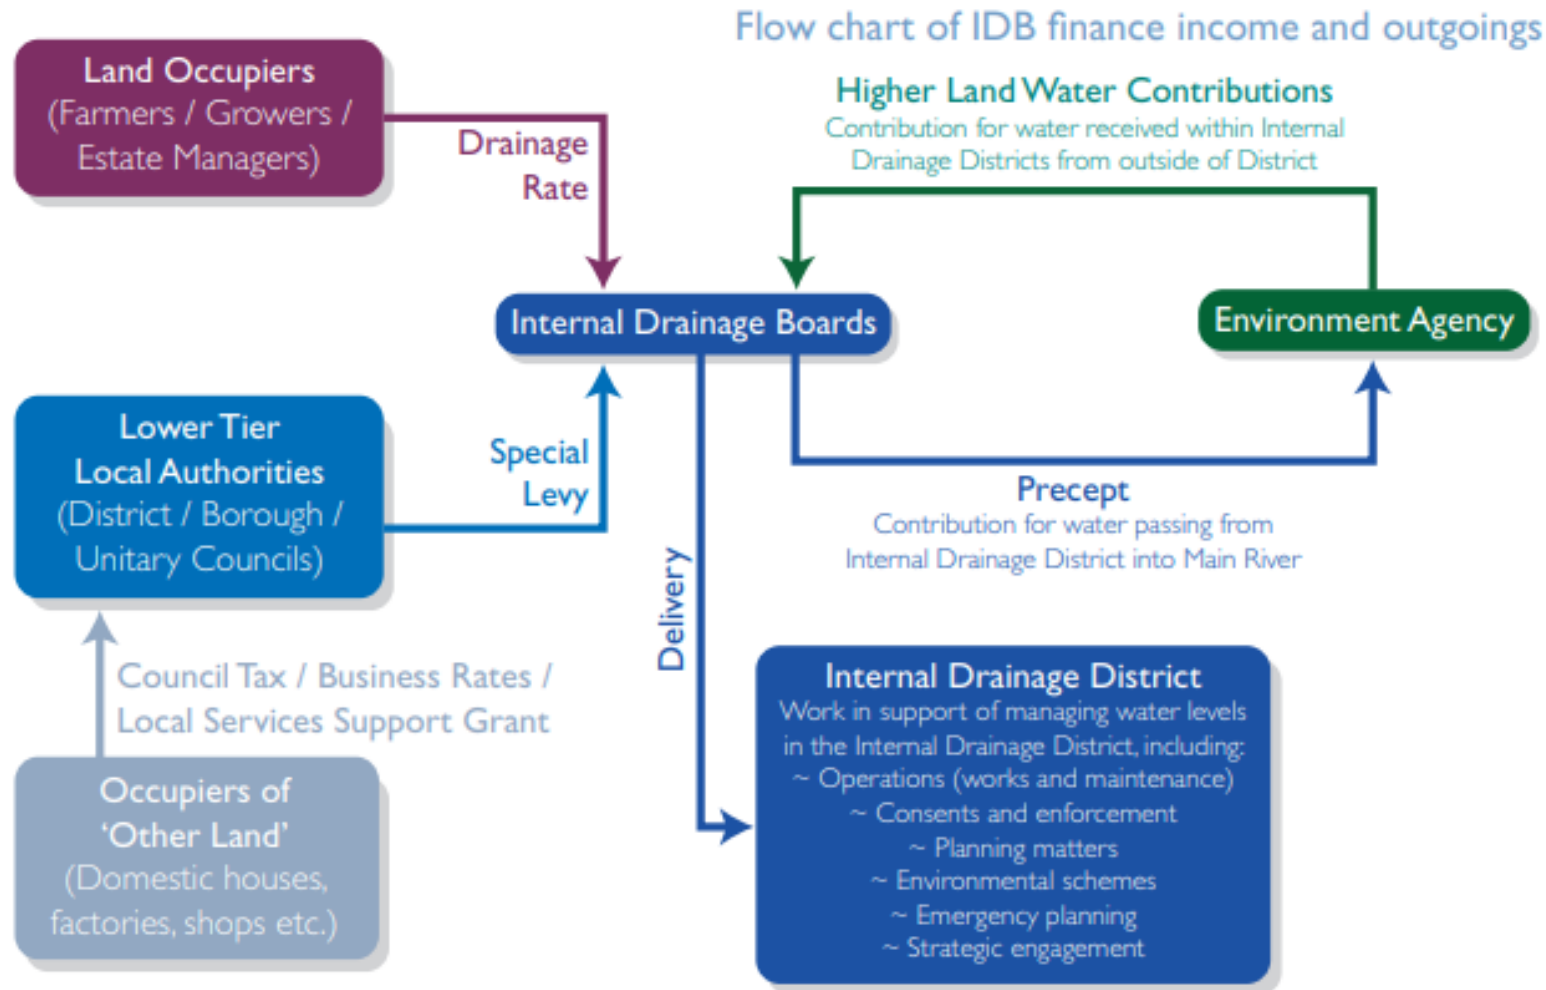

# What IDBs do:

- ▶ Reduce flood risk to people, property, critical infrastructure, businesses and agricultural land.
- ▶ Manage land drainage & water levels for agricultural and environmental needs - in times of drought & flood.
- ▶ Maintain rivers, drainage channels, culverts, sluices, weirs, embankments and pumping station control structures.
- ▶ Keep watercourses clear of obstructions.
- ▶ Provide a consents & enforcement service .
- ▶ Scrutinise planning and development within drainage districts.
- ▶ Work with partner FRMAs including the Environment Agency, local authorities as LLFAs & LPAs. In Greater Lincolnshire: 2 Unitary Councils & 1 Upper Tier Council, 7 District/Borough Councils, Town & Parish Councils, C&RT and water companies.

# How IDBs are Funded - note no national Government funding

# Witham & Humber Drainage Boards (1)

- ▶ Accountable to both Defra and the EA, as the 2 supervising authorities.
- ▶ Economies of scale & efficiencies of 4 separate IDBs working collectively under a legal partnership, a Joint Services Agreement, since 01st April 2017.
- ▶ Sharing a management structure, co-location, shared use of plant & Operatives across the Boards and reducing costs where practicable to do so [HQ at Lincoln combined with Upper Witham operational depot, operational depot now combined for Witham First and Witham Third DIDBs at Woodhall Spa and a third depot for North East Lindsey IDB at New Holland on the Humber South Bank].
- ▶ Group Income & Expenditure turnover of c £7.25 million 2025/26 (excluding Capital FDGiA and IDB Fund grant income).
- ▶ Staffing: 5 Operatives on W1st, 10 Operatives on UW, 13 Operatives on W3rd & Contractor service for NELDB. 16 FTE Engineering, technical and finance staff working across the 4 IDBs. Smaller public authorities - single purpose & efficient.
- ▶ IDB £91 million Fund 2024/25 & 2025/26: 33 schemes at £17.4 million.

# Witham & Humber Drainage Boards (2)

- ▶ Operate & maintain 53 Pumping Stations across 48 sites.
- ▶ Maintain annually 967 Km of watercourses across the 4 Boards: UW 320Km, W1st 272 Km, W3rd 233Km and NELDB 142Km.
- ▶ Planning scrutiny to Local Planning Authorities, consents, enforcements and capital improvement schemes with communities within 4 drainage districts.
- ▶ Total hectares each IDB drainage district : UW 21,095ha W1st 16,384ha W3rd 15,196ha and NELDB 11,250ha.
- ▶ Lincolnshire FRMA water levels, flood risk & drainage partnership- an established partnership since 2012.
- ▶ Undertake Public Sector Cooperation Agreement (PSCA) works on main rivers for the Environment Agency, averaging £740k per annum average in the previous 4 financial years to 2025/26.
- ▶ Members of ADA and input to national industry policy and practice.

# Reduced &/or temporary cessation of main river maintenance (1)

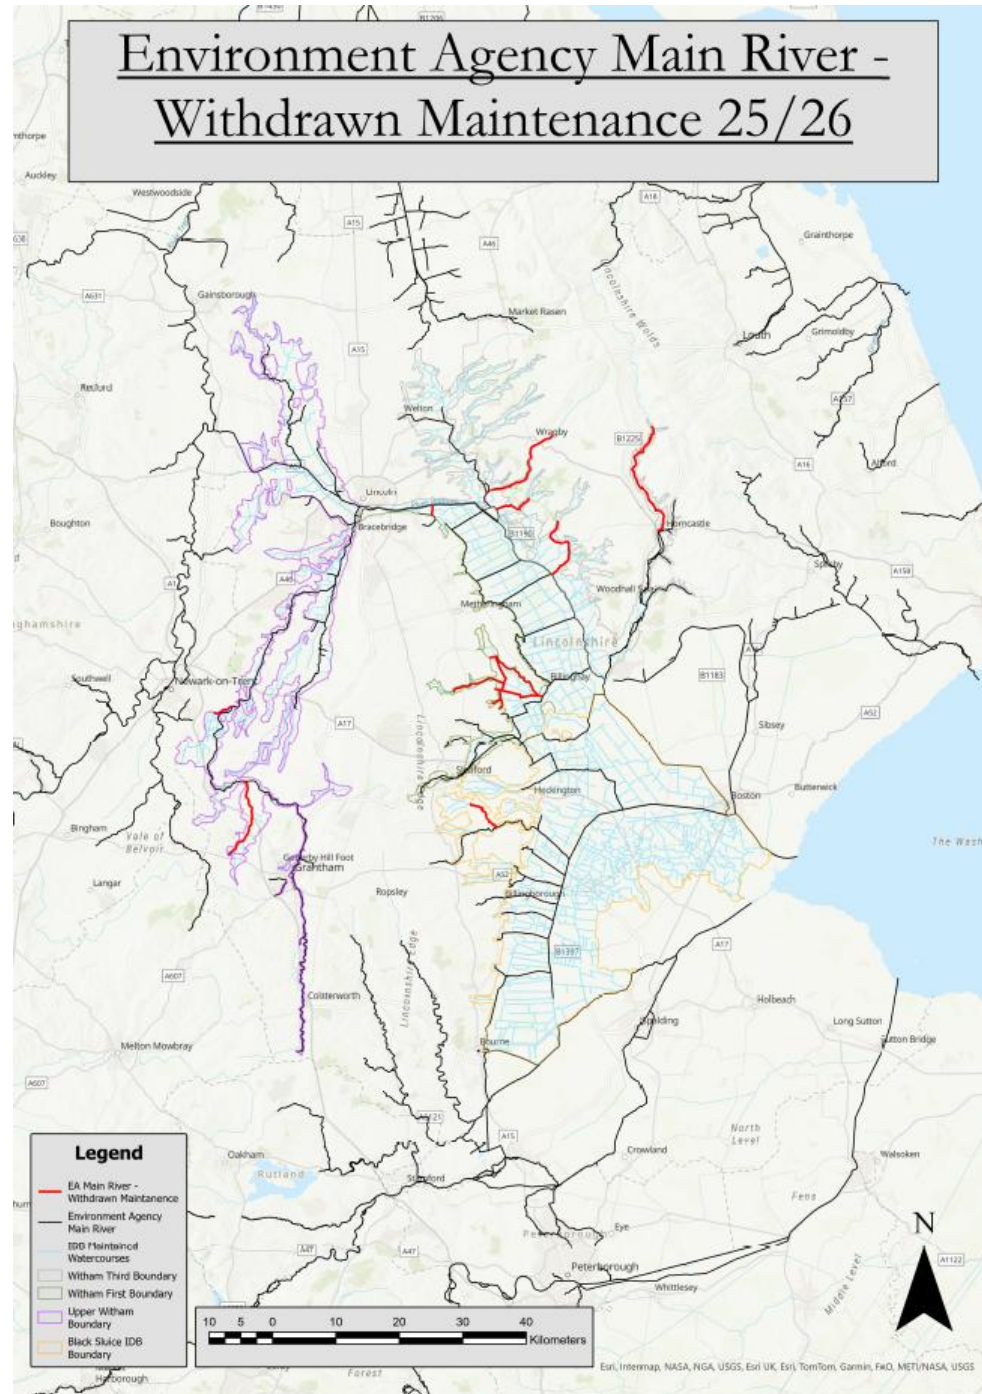

- ▶ Reduced maintenance is short-term financial gain by one public body, the EA, but at the expense of the longer-term asset condition and at great financial & operational risk to the systems and assets of other public bodies. A perfect example of **cost saving** in one part of public services **being cost shifting** to other public bodies.
- ▶ **Temporary cessation of EA revenue funded maintenance on low & medium consequence systems**- step down deterioration of asset condition & consequent increased risk. When does temporary become permanent & EA invoke protocol for permanent cessation? If permanent cessation, impact on licensing of maintenance by third parties. What are the future maintenance plans for main rivers or are we seeing the start of a policy of abandonment?
- ▶ Reduced maintenance is cost saving by one public body, but it is cost shifting to **riparian landowners** and other **public bodies like IDBs, Highways Authorities**. Assessment of **social costs** impact of temporary road closures arising from repeat flooding in frequently flooded locations [e.g. impact on commuters, cost & performance impact of ambulance diverts to the NHS] ?
- ▶ **impacts upon IDB systems & assets**: inability of IDB lowland systems to function as originally designed to provide agreed standards of protection when **frequently inundated by water**, to a **greater depth and duration**, from **EA main rivers** with water originally not designed to enter those IDB systems ( e.g. South Delph Lincoln and W1st's Sandhill Pumping Station). **W&HDBs had 18 [of 53] pumping stations inundated during 23/24 Storms Babet & Henk.**
- ▶ **Response & Recovery** costs far outweigh the costs of **planned preventive maintenance**.

# Reduced &/or temporary cessation of main river maintenance (2)

- ▶ One-off national IDB £91 million Fund 2024/25 & 2025/26 has been an excellent opportunity. But IDBs have no direct source of flood response and recovery funding.
- ▶ Landowner dissatisfaction about adequacy of main river maintenance & increased business risk, due to more frequent flood events impacting for longer durations - affecting agricultural businesses, land productivity and UK food security.
- ▶ Calls grow louder for separation of river maintenance function from other EA responsibilities and debate about a different way forwards main river maintenance responsibilities and accountabilities.
- ▶ IDBs across Lincolnshire pay £2.2 million per annum as mandatory precept to the EA. Service received increasingly questioned.
- ▶ Bleak future for the fens under the current EA revenue maintenance funding regime: **13 main river breaches in Lincolnshire winter 2023/24 & not all yet repaired.** Used to be 'fix, repair & sort out finance later' but no guarantee of incident response/recovery funded nationally outside Area budgets. Main river significant instances of **bank breaches, overtopping and seepage.** Lack of maintenance on the River Witham tributaries -e.g. Branston Delph has 19 residential properties in the flood cell and main rivers North, South, East and West- only the River Witham qualifies for maintenance funding but EA and IDB staff aware the LHB of Branston Delph is in poor condition and there is a significant risk of uncontrolled breach into Heighington Fen [IDB's Heighington Fen PS the last line of defense out of Lincoln and risks inundation].

# Environment Agency Main River - Withdrawn Maintenance 25/26

This map displays the Environment Agency Main River in Lincolnshire, England, for the 25/26 financial year. The river is highlighted in red, showing its course from the north-west towards the south-east, eventually flowing into the Humber estuary. The map includes various geographical features such as towns (e.g., Lincoln, Boston, Louth), roads (e.g., A1, A16, A103), and other rivers (e.g., Great Ouse, Trent). A legend in the bottom-left corner defines the symbols used: a red line for the EA Main River - Withdrawn Maintenance, a black line for the Environment Agency Main River, a blue line for EDD Maintained Watercourses, a grey line for the Witham Third Boundary, a light grey line for the Witham First Boundary, a purple line for the Upper Witham Boundary, and an orange line for the Black Sluice IDB Boundary. A scale bar at the bottom indicates distances in kilometers (0 to 40 km). A north arrow is located in the bottom-right corner. The map is sourced from Esri, Intermap, NASA, NGA, USGS, Esri UK, Esri, TomTom, Garmin, FMO, METU/NASA, USGS.

# Reduced EA main river maintenance in Lincolnshire on low & medium consequence systems.

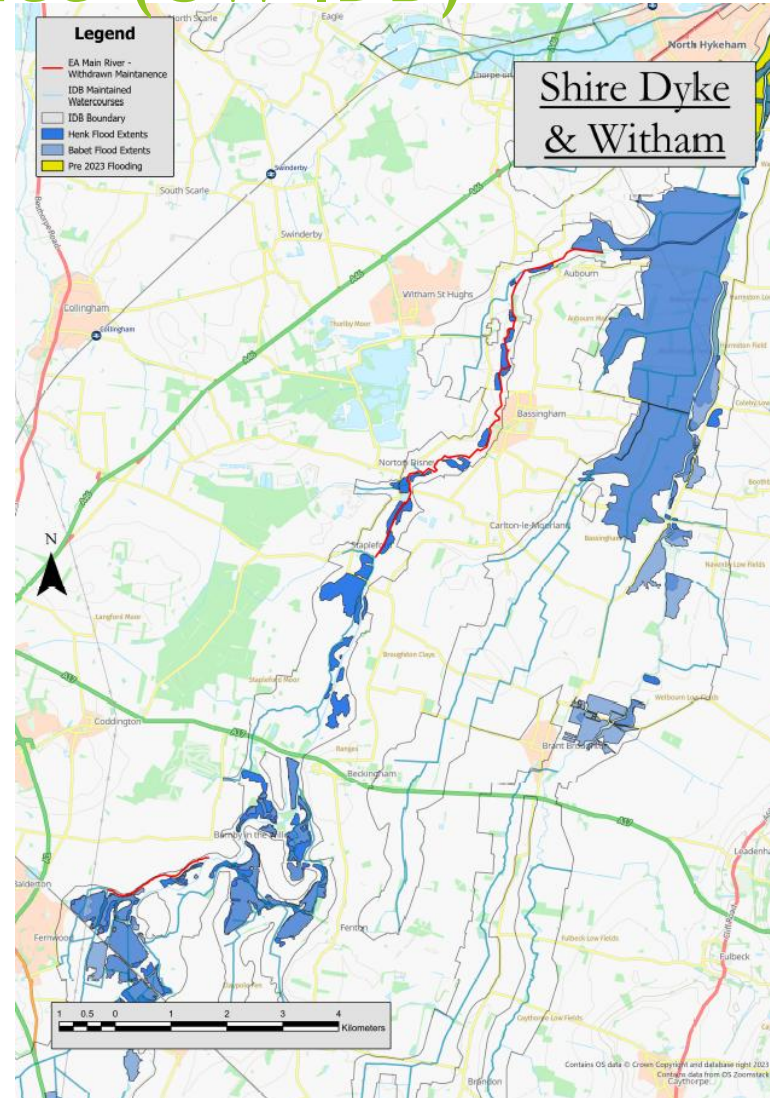

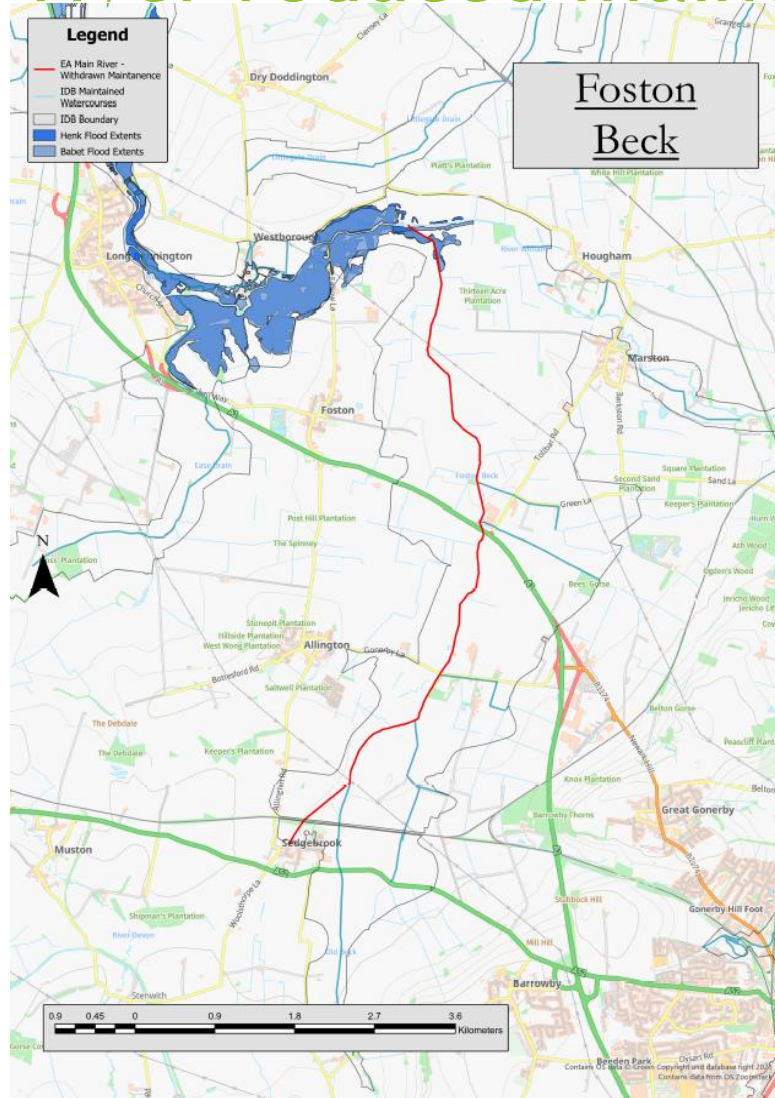

- ▶ Maintenance ceased on some EA low consequence systems 2022/23 onwards [across 29 systems in Lincolnshire & Northamptonshire], temporary cessation.
- ▶ Maintenance ceased on some medium consequence EA systems in 2025/26 in Lincolnshire, temporary cessation.
- ▶ When does temporary become permanent & who maintains thereafter & under what licensing arrangements and at whose expense? Impact on asset condition. Impact on third party assets and systems?
- ▶ W&HDBs undertaking maintenance on EA main rivers under PSCAs at the IDBs' cost- for 2025/26 only- due to concerns about asset condition.
- ▶ The following slides illustrate the flood extents in parts of Lincolnshire in Storms Babet [Oct '23] & Henk [Jan '24] against the stretches of EA main river where maintenance has been withdrawn.

# Storms Babet & Henk Flood Extents - EA main river reduced maintenance (Witham Third DIDB)

# National IDB Fund of £91 million - W&HDB's £17.4m

- 33 schemes - totalling £17.4m
- Focus on recovery, resilience and innovation.
- 22 delivered by 31/03/2025 - totalling £4.9m.
- 11 schemes to be completed by 31/03/206 - totalling £12.5m.
- Excellent delivery model and good news for schemes which do not qualify for FDGIA funding.
- No commitment of future funding.

- Risk of likely future increases in standing charges from 01.04.26(Transmission costs)
- Reduced main river maintenance increases frequency and duration of flood events, resulting in increased electricity usage & costs.

# Conclusion/Summary:

- ▶ Reduced EA maintenance on main rivers is short-term cost saving by one public body, but it constitutes cost shifting to other public bodies including IDBs.
- ▶ Asset condition will deteriorate, both EA main rivers and the IDB lowland systems which depend on them functioning as intended to meet their IDB standards of protection.
- ▶ IDB systems and assets will risk more frequent inundations, to greater depths & for longer durations. This will cost IDBs more, added to which is the increasing cost of electricity as a major cost driver for IDBs.
- ▶ Incident response and recovery is not guaranteed or funded nationally or for IDBs directly, e.g., 13 bank breaches in Lincolnshire main rivers in winter 2023/24.
- ▶ Future management and funding arrangements for incident response and recovery phases in flood events? Will main river breaches be reinstated?
- ▶ Agricultural businesses and rural areas will suffer the consequences; highly productive land use will degrade over time & challenge UK food security.
- ▶ Councils depend upon well drained land and good water & flood risk management in their communities to achieve their economic growth and prosperity objectives, e.g., housing growth.
- ▶ If the EA is unable to maintain main rivers, who will do so- or is the UK supporting a policy of abandonment of rivers as critical infrastructure?
